Carry out post procedural equine dental activities

Overview

This standard covers carrying out the activities required following equine dental procedures. It includes providing advice to the owner/agent, completing records and maintaining hygiene and bio-security.

This standard is for equine dental technicians. Users of the standard will need to ensure that practice reflects up to date information and policies, and that they work within the limits of their authority, expertise, training, competence and experience.

Glossary

Horse

For the purpose of this standard the term horse includes donkey, ass, mule, hinny, pony and other equidae.

Animal welfare legislation

England and Wales - Animal Welfare Act 2006 Scotland - Animal Health and Welfare Act 2006 Northern Ireland - Welfare of Animals Act (Northern Ireland) 2011

Category 1, 2 and 3 Equine Dental Procedures

Category 1 Procedures

Those procedures which an individual can perform after recognised training without specific attainment of qualifications.

Examination of teeth;

Removal of sharp enamel points using manual rasps only;

Removal of small dental overgrowths (maximum 4mm reductions) using manual rasps only;

Rostral profiling of the first cheek teeth (maximum 4mm reductions), previously termed 'bit seat shaping';

Removal of loose deciduous caps; and

Removal of supragingival calculus.

Category 2 Procedures (Replaces category 2 as on 2004 draft)

Additional procedures suitable for delegation to an EDT who has trained and passed an examination approved by DEFRA:

Examination, evaluation and recording of dental abnormalities;

The removal of loose teeth or dental fragments with negligible periodontal attachments;

The removal of erupted, non-displaced wolf teeth in the upper or lower jaw under direct and continuous veterinary supervision;

Palliative rasping of fractured and adjacent teeth; and

The use of motorised dental instruments where these are used to reduce overgrowths and remove sharp enamel points only. Horses should be sedated unless it is deemed safe to undertake any proposed procedure without sedation, with full informed consent of the owner.

Category 3 procedures

All other procedures and any new procedures, which arise as a result of scientific and technical development, would by default fall into category 3, which are those procedures restricted to qualified veterinary surgeons and are not proposed for deregulation. It is therefore NOT legal for these to be performed by non-veterinarians.
