
Overview

This standard details the requirements for activities to be carried out either by you as a herbal practitioner, or a trained dispenser acting on your behalf. You will at all times work within Standard Operating Procedures (SOPs) that relate to the way in which you provide the herbal medicine dispensing service. You will also work within the ethical and legal requirements for the provision of a herbal medicine dispensing service. The first element covers how you, or your dispenser, would receive and validate a herbal prescription. The second element covers the actual preparation of the prescribed items, it also covers extemporaneous dispensing. You will need to accurately calculate the quantities of the ingredients needed, make, pack and label the product, correctly taking account of relevant legal requirements. Health and Safety and Control of Substances Hazardous to Health (COSHH) regulations are especially important. The third element covers the issuing of the prescribed medicine(s) or product(s) to the client and the giving of information and advice to ensure that the client receives the correct treatment. When reading this standard it is important to bear in mind that some of the criteria will refer to a herbal dispensers activities and that these may not always be relevant to practitioners making up their own prescriptions.

Users of this standard will need to ensure that practice reflects up to date information and policies.

Knowledge and understanding

You need to know and understand:

- K1 the limits of your own authority and (for a dispenser) when to refer to the herbalist
- K2 the importance of maintaining dispensary records
- K3 the current ethical and legal professional requirements that govern the dispensing and issuing of a herbal prescription
- K4 that some clients will have special needs
- K5 the different reference sources that are available and when you need to use them
- K6 the importance of Standard Operating Procedures and reasons for following them
- K7 the basic principles of modern herbal medicines management
- K8 exactly what client details are required on a prescription and why they are necessary
- K9 research regulations and procedures
- K10 the procedures for dealing with clients with special needs
- K11 the transactional and administration procedures as required by government regulations and those that apply to your workplace
- K12 how to use herbal reference sources and guidelines for dispensing
- K13 the procedures for validating prescriptions and reasons for following them
- K14 how to recognize a possible forged prescription and actions to take
- K15 the requirements to be satisfied for a complete, unambiguous and valid prescription and actions to take if validity is questionable
- K16 the prescribing conventions and abbreviations
- K17 the botanical terms used to describe herbs including Latin terms and/or tradition specific names where relevant, for parts of plants
- K18 how herbal medicines are administered and the affect they have on basic human physiology
- K19 different strengths, doses and quantities of medicines and why they are used
- K20 the actions and use of drugs including different drug interactions and contra-indications
- K21 why and when Prescription Records are used
- K22 the regulations relating to the prescription requirements for restricted herbs
- K23 the current legislation relating to the validity of prescriptions
- K24 procedures for dispensing prescriptions plus principles underlying these
- K25 basic hygiene and the importance of maintaining a clean working environment and equipment; personal hygiene and use of protective clothing
- K26 labelling requirements and conventions; measurement and transfer of medicine from bulk; properties of container types and when to use

SFHCHHM3

Dispense herbal medicines and products

- K27 factors which cause deterioration of stock: microbial contamination; environmental and storage conditions
- K28 handling and storage of hazardous materials and procedures to minimise risk
- K29 principles of calculations, weights and measures
- K30 the correct use and maintenance of dispensing equipment
- K31 the procedures for preparing products plus principles underlying these
- K32 chemical, physical and energetic properties of ingredients relevant to formulation and compounding
- K33 the procedures and principles for issuing dispensed medicines and products and the local Standard Operating Procedures that relate to this
- K34 why it is important to confirm the client's identity; provide information on use of medicines and products; provide information on storage and maintenance of herbal medicines and products, provide information on possible side effects, to ensure the safe, effective use of treatments
