

## SFHCHS51

### Discontinue infusions delivered subcutaneously and remove syringe driver or infusion device

---

#### Overview

This standard covers the removal of syringe drivers or infusion devices. It also includes the disposal of contaminated waste. This standard covers the removal of syringe drivers or infusion devices used for subcutaneous treatments given to adults.

Users of this standard will need to ensure that practice reflects up to date information and policies.

## SFHCHS51

### Discontinue infusions delivered subcutaneously and remove syringe driver or infusion device

---

#### Performance criteria

*You must be able to:*

- P1 ensure all of your actions adhere to all legal requirements in addition to national and/or local policy and guidelines
- P2 review the patient's notes and identify any special instructions
- P3 greet, accurately identify the patient and/or key person and introduce yourself and any colleagues present
- P4 inform the patient and/or key person of the procedure and accurately answer any questions at an appropriate level and pace
- P5 re-assess the patient's physical condition, their fitness for the procedure, and seek advice from an appropriate team member and/or specialist if required
- P6 assess the patient and/or key person's psychological and emotional state and respond appropriately
- P7 remove cannula and apply appropriate dressing to wound site if required after checking for any allergies
- P8 dispose of any unused drugs according to organisational and legal requirements
- P9 remove and dispose of contaminated waste
- P10 ensure the syringe drivers or infusion devices are returned when treatment is discontinued
- P11 record details of the procedure in the patient's notes, medication charts and any other relevant documentation
- P12 recognise when you need help and/or advice and seek this from appropriate sources
