

## SFHFMH11

# Support an individual in forensic mental health care to participate in treatment

---

### Overview

This standard covers the work of staff in encouraging individuals in the care of forensic mental health services to play a part in planning and implementing their assessment and treatment. It is intrinsic to the Care Programme Approach. It is a significant component of engagement with individuals. It recognises that individuals can make engagement and treatment difficult. The competence describes how staff can help individuals to identify and work through their difficulties, thus providing a positive experience that can be linked in with the process of recovery.

Users of this standard will need to ensure that practice reflects up to date information and policies.

### Support an individual in forensic mental health care to participate in treatment

---

#### Performance criteria

*You must be able to:*

- P1 engage the individual proactively (e.g. by going and talking to them rather than waiting for them to come to you)
- P2 develop an open and honest dialogue with the individual about their treatment which also respects their experience
- P3 determine the level of the individual's awareness of their symptoms when they are psychotic or suffering from an acute stage of their mental disorder
- P4 determine how far the individual is aware of how others experience them and how their own thoughts, feelings and behaviour are different when they are unwell
- P5 engage the individual in a way that is sensitive to their cognitive functioning and ability
- P6 assess how far the individual is ready for change (eg 'stage of change' in Motivational Interviewing) and willing to comply with the whole, or parts, of their care, treatment and management plans
- P7 help the individual draw up or review a realistic Advance Statement consistent with their care plan for how they wish to be treated if they become unwell, disturbed or violent (eg what interventions are available and should be used)
- P8 support the individual in identifying triggers or patterns that can lead to any disturbed or violent behaviour or emotional distress
- P9 encourage the individual to identify treatments of choice among the available medical, psychological, nursing and psychosocial interventions
- P10 encourage the individual to recognise the negative aspects of not participating upon their health, criminality and length of stay
- P11 evaluate the benefits of positive risk taking and adjust the management plans accordingly

### Knowledge and understanding

*You need to know and understand:*

- K1 interview techniques and how to use them
- K2 mental health disorders
- K3 psychopathy and personality disorder
- K4 self-harming behaviours, including ligation
- K5 offending behaviours, especially violent behaviour not related to mental illness
- K6 substance misuse
- K7 anger management
- K8 psycho education techniques
- K9 the range of medical, psychological, nursing and psychosocial interventions available at your own establishment and elsewhere
- K10 evidence of the effectiveness of different treatments, singly and in combination
- K11 inquiry reports on forensic mental health settings, including recommendations and analysis of practice in the treatment of individuals
- K12 impact of legislation and different offending modes on recovery and recidivism
- K13 a range of therapeutic intervention techniques
- K14 a range of communication styles and methods, including those of interviewing
- K15 the effect on risk when an individual is either non-compliant and/or disengages from their treatment plan
- K16 assessing the immediacy and gravity of present and potential risk
- K17 the assessing impact of the physical environment and structures on present and potential risk behaviours
- K18 gathering relevant and contemporary information and methodologies for doing so(e.g. HCR 20)
- K19 techniques for monitoring and evaluating the immediacy and gravity of risk behaviours and previous offending
- K20 identifying benefits to individuals from different treatments
- K21 the religious beliefs of different cultures
- K22 the effects of culture and religious beliefs on individual communication styles
- K23 the different features services must have to meet people's gender, culture, language or other needs
- K24 the effects of different cultures and religions on care management
- K25 the principle of confidentiality and what information may be given to whom
- K26 how information obtained from individuals should be recorded and stored
- K27 relevant clinical audit
- K28 the evidence base and research on the participation of individuals in their
