

SFHGEN61

Collect and transport deceased individuals and body parts

Overview

This standard covers collecting and transporting deceased individuals and/or body parts from various locations such as a nursing home, site of a road traffic accident, or a hospital department to a mortuary or funeral home. This standard is not relevant for collecting and transporting living people or cadaveric parts that are still clinically viable for donation or transplantation.

Users of this standard will need to ensure that practice reflects up to date information and policies.

SFHGEN61

Collect and transport deceased individuals and body parts

Performance criteria

You must be able to:

- P1 access the deceased individual and body parts in a manner that does not compromise the environment or the scene of death/site for forensic examination
- P2 identify whether there is a need for additional assistance in collecting and transporting the deceased individual and body parts, and seek such assistance without delay
- P3 adhere to legislation, policies and protocols regarding certification of death and authorisation for removal
- P4 apply standard precautions and health and safety measures to prevent cross infection and contamination from the handling of deceased individuals or body parts
- P5 collect and transport the deceased individual and body parts safely in a manner that respects the individual's privacy and dignity, wishes, beliefs and values,
- P6 complete the required documentation accurately and legibly and share or store it as appropriate
- P7 maintain the security of the deceased individual's personal belongings
- P8 behave in a considerate and respectful manner towards any family or significant others who may be present
- P9 work in accordance with patient confidentiality, data protection and other relevant legislation, protocols and guidelines
- P10 recognise the effect of dealing with death on your own emotions and manage them effectively
